

P08 - Newest Observations On Ew-Type Stars From The Amateur-Professional Collaboration On The  
Bsn Project By Ipsa Vega

Paul Pointier - IPSA

As part of a collaboration with the Gemini Pro-Am program, IPSA Vega has observed several binary eclipse systems to get data for the BSN project. This project is part of a scientific initiative aimed at transmitting knowledge among members of the association about collecting and analyzing data. This data is, afterwards, gathered to establish a phase-diagram (magnitude on period of the observed star) that is shared to professionals or used in a paperwork.
